PAStech

Data Visualisation

Industry Automated

Visualise your business' performance in real-time across any device.

Simple, beautiful and personal.

PAStech enables businesses to see a real-time portrait of all processes and data sources from one simple interface, from any device.
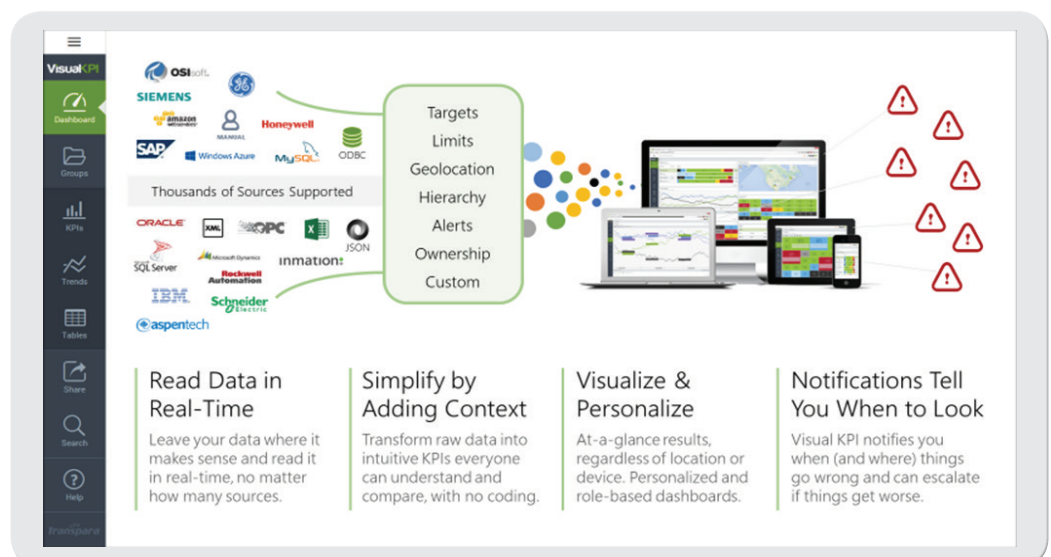

We implement Visual KPI: software specifically designed for data intensive industries, empowering decision makers with real-time business visibility.

How it works

Installed on premise or in the cloud as part of the PAStech managed services platform, Visual KPI reads your data from its original sources. We create the business context you need around the data so that you can make critical business decisions in real-time.

Your dashboards, your data, displayed your way.

Its that simple, it's that quick.

Read Data in Real-Time

Leave your data where it makes sense and read it in real-time, no matter how many sources.

Simplify by Adding Context

Transform raw data into intuitive KPIs everyone can understand and compare, with no coding.

Visualize & Personalize

At-a-glance results, regardless of location or device. Personalized and role-based dashboards.

Notifications Tell You When to Look

Visual KPI notifies you when (and where) things go wrong and can escalate if things get worse.

Hundreds of the world's best companies use Visual KPI every day to improve operations, reduce downtime, and make better decisions.

westernpower

"Adds Value from day one. Great support team. Loved by end users!"

— Julian Rouse, Area Manager, Western Power

Exelon.

"When the executives check Visual KPI before doing anything else in the morning, you know it's a must-have tool."

— Steve Noel, Director of IT, Exelon Energy

mohawk

"We were operational in less than one hour, collecting real-time information from across our enterprise. In a matter of 5 to 10 seconds, you can focus in and know exactly what's wrong."

— Paul Stamas, Vice President of IT, Mohawk Fine Papers

nationalgrid

"We realized ROI in less than 6 months. Any time we avert an environmental incident, we save hundreds of thousands of dollars to sometimes even millions of dollars."

— John Ragone, Process Optimization Manager, National Grid

Monitor your

- Real-time data
- Physical assets
- Financial assets
- Human assets

- Sites
- Data centres
- Power generation
- Power Consumption

- Cloud infrastructure
- Pipelines
- Trucks, trains, ships
- Projects

- Production
- Internet of Things (IoT)
- Communications infrastructure

Easy to get started

✓ Up and running in 90 minutes

✓ On-premise or in the cloud

✓ No coding required

About PAStech

PAStech automates industrial processes, providing engineering expertise in process control systems, private cellular networks, cyber security and data visualisation.
