PAStech

Industry Automated

PAStech provide a portfolio of managed services to enable your enterprise IIoT.

The PAStech Process

Engineering Design Team → **Private IIoT Connection** → **Cyber Security and Management** → **Data Visualisation and Reporting**

Engineering – Connectivity – Security – Visualisation

PAStech provide specialist engineering capabilities to design your enterprise IIoT or integrate with legacy networks. Secure private cellular connectivity for your end points delivers your data to fully managed cloud-based SCADA and Control systems, our data visualisation platform or directly to your enterprise historian, behind your corporate firewall.

OT Networks and hardware are secured on the enterprise network and managed via our cloud-based security platform. Services are monitored and managed from our OT Security Centre.

Reporting and visualisation is provided using Visual KPI, giving you real-time data from your devices, security updates as well as service delivery information.

Engineering Design & Consultancy

Our expertise covers industries from energy and resources through to manufacturing.

We work to deliver projects from concept, detailed design through to implementation, commissioning and operational support.

Private Cellular for IIoT

Enterprises must manage growing networks of devices, or "things" that make up the Internet of Things, providing access to different mobile workers over public cellular networks.

PAStech gives businesses a secure, scalable, private intranet, so that data can be managed and controlled over any public cellular network.

Cyber Security

Our Security as a Service (SaaS) platform provides Operational Technology (OT) visibility, cyber threat detection and secure remote access ensuring compliance to current OT cyber-security legislation.
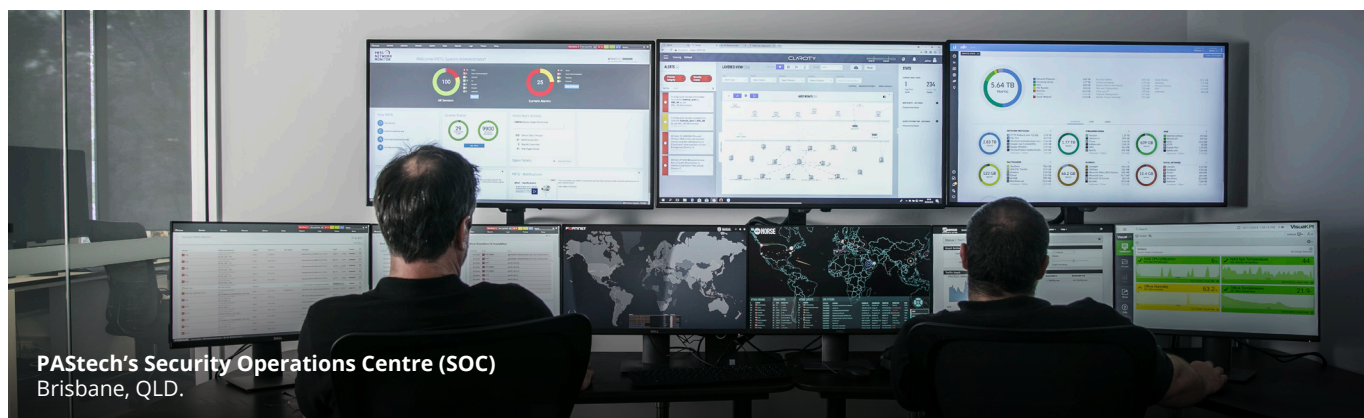

Our technology has been tested, selected and adopted by the most influential industrial control and networking companies in the world.

Data Visualisation

PAStech enables businesses to see a real-time portrait of all processes and data sources from one simple interface, from any device.

We implement Visual KPI: software specifically designed for data intensive industries, empowering decision makers with real-time business visibility.

PAStech's Security Operations Centre (SOC)
Brisbane, QLD.

Industry Automated

About PAStech

PAStech automates industrial processes, providing engineering expertise in process control systems, private cellular networks, cyber security and data visualisation.
